Winter Maintenance of Fire Hydrants

The North Reading Fire Department and North Reading Department of Public Works request assistance from residents and business owners in removing snow and ice from around the fire hydrants on and near their properties.

The accumulation of snow and ice around fire hydrants can significantly increase the time needed to access and operate the hydrants in an emergency situation. By taking a few minutes at the end of each storm to clear away this snow and ice, the hydrants protecting your property remain accessible.

Residents who are unable to remove the snow and ice, or who are unable to locate the fire hydrants close to their homes, are asked to contact the Department of Public Works at (978) 664-6060.
