

## Project 500

**Scope** It has been identified that ~500 households in N Reading are occupied by only one person who is age 65 or older. Options for these people are to pass peacefully at home, to move out voluntarily, or to be forced out for economic and/or health reasons. In either case, the NRSAT goal is to know these people achieve their goals, reach and out and provide support, and help them with transition if the need or desire should arise.

### Specific Objectives

- Identify the 500 people by name, address and contact info.
- Reach out, identify needs and line up resources to help meet those needs, especially including Senior friendly health service providers and affordable and nutritious food.
- Project 500 will eventually lead to better resources for other households with Senior occupants in N Reading.

### Challenges

- Identifying the 500 people is not so easy. Danielle McKnight is trying to match the Wiki data on N Reading vs. census data. I may need to consider an ad in the paper or some other means.
- On hold until identification can be made.
